More or less **barrier-free** following **DIN 18040**

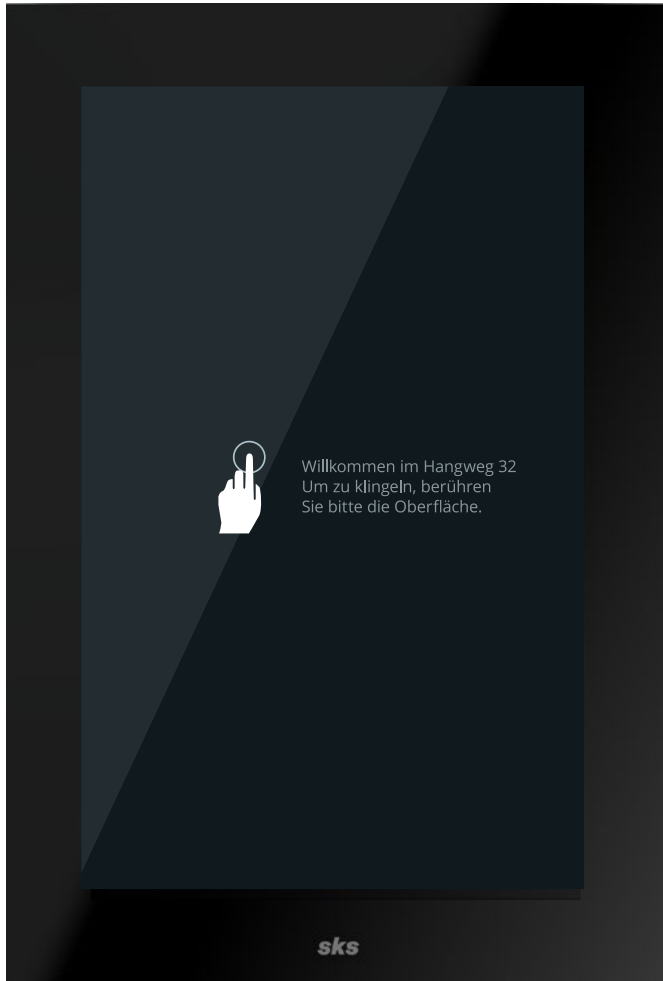

Functional overview

Comfortable search function

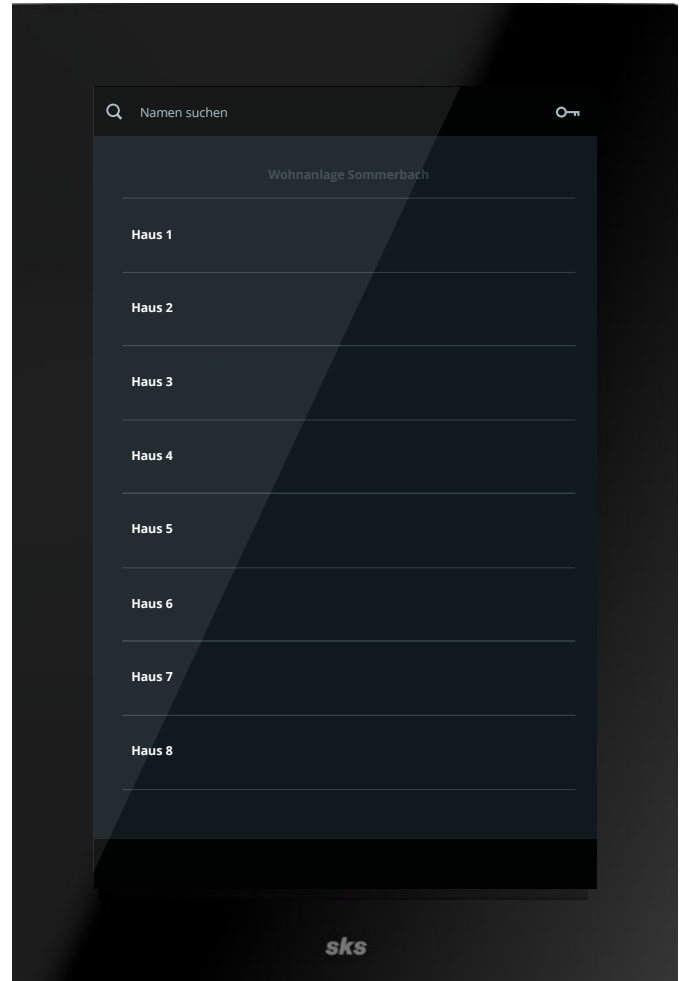

For larger residential estates or office buildings names can be found easily and safely via the search function with a virtual key pad.

Functional overview

Welcome screen

If a person approaches the door station, the color display is switched on automatically.

Well-structured name search using groups

At a central door the residents of each house can be assigned to a group (e. g. houses 1 to 3 in a residential estate).

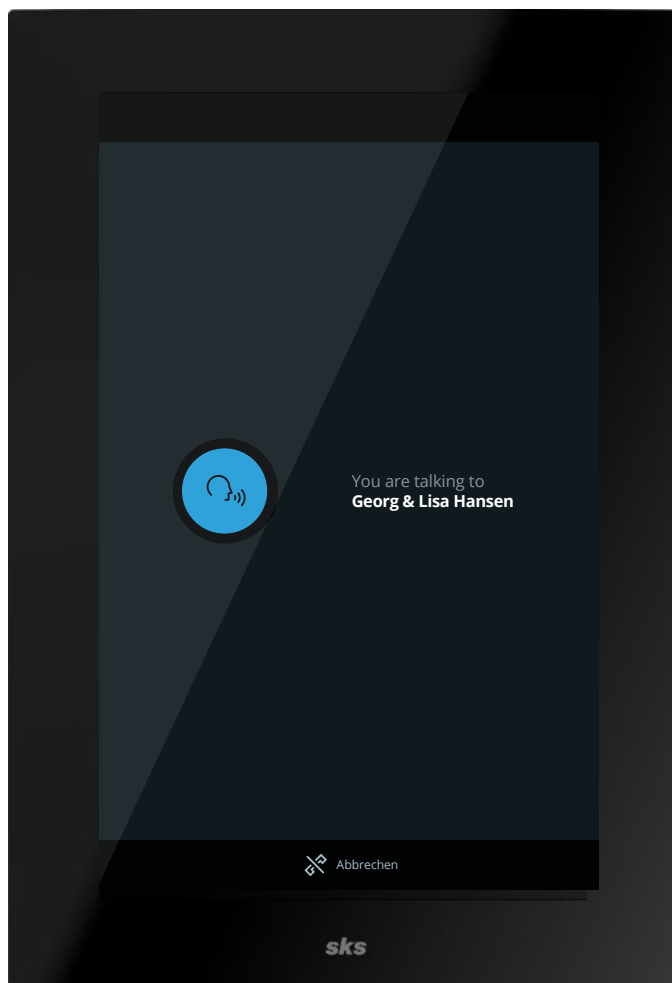

Start-up/configuration

Easy start-up and configuration via the web interface, using a PC/laptop.

Optionally the configuration can directly be done at the door station.

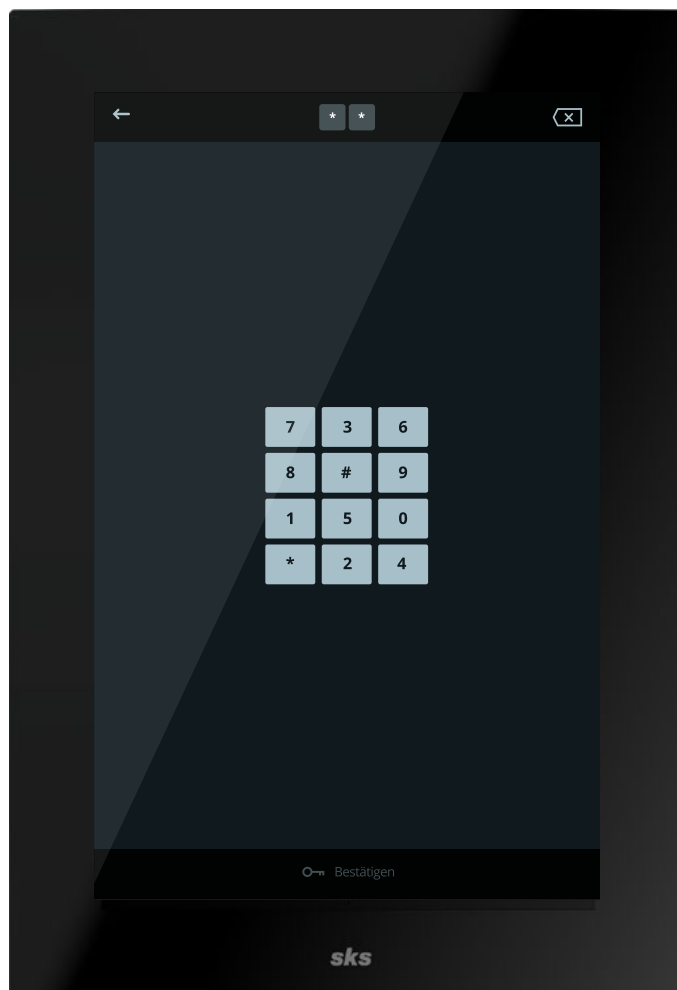

Functional overview

Functions displayed – barrier-free according to DIN 18040

The hearing-impaired get symbolic and textual status information on screen: After ringing „Ruf gesendet“ (Call has been sent) appears on the display. When the call is answered „Sie sprechen mit...“ (You are talking to) is displayed and when the door opener is activated it says „Die Tür wurde geöffnet“ (The door has been opened).

Virtual code lock – maximum security

Using the virtual code lock function the COMFORT door station may also function as a door opener. Thanks to the randomly displayed number pad with digits 0 ... 9 – for every use the numbers are displayed in a different order – a maximum security against being spied on is guaranteed.

All information can also be found in our COMFORT Film.
